LeRobot SmolVLA
PyTorch, 450M params
fp32 reference
export_split.py
3 static ONNX graphs
+ TensorRT 8.5 flags
Engines
TensorRT 8.5 or 10,
ONNX Runtime
C++ runtime
vision ×2, prefix ×1,
expert_step ×10
Action chunk
50 × 7 actions,
50 Hz control loop
Parity gate: LeRobot's own fp32 on real LIBERO frames, frozen into bundles
compared at every split point: image tokens, prefix K/V, each step's v_t, the action chunk
